## AgraLi®

**AgraLi®**  
The low-chloride liquid potassium fertilizer (2-0-12-3)

“Best I have seen in years – like liquid gold”

Customer in south GA

## CHALLENGE

As the global population is growing, we will eventually run out of arable land to sustain the crops we need to feed the world. Cropland is a finite resource, competing with natural forests and growing cities. In addition, food, feed and fuel compete with each other for cropland. AgraLi® helps improve the efficiency of global land usage in order to meet this challenge.

Corn/Sunflower customer, southern AL

## WHAT'S IN IT FOR YOU

As Evonik we are committed to lead our market today – and achieve sustainability tomorrow. AgraLi®, the sulfurous organic and mineral liquid NK fertilizer, is obtained during the production of methionine, an essential amino acid that is used as a feed additive primarily in monogastrics diets to ensure healthy and environmentally friendly animal nutrition. Fertilization using AgraLi® is sustainable for the environment. It is continually produced and its consistent high quality is ensured through regular analysis.

### Minimum Product Specifications

#### AgraLi®

total nitrogen (organically bound)	1.8% N
Phosphorus pentoxide	0.0% P <sub>2</sub> O <sub>5</sub>
total potassium carbonate (soluble)	12.7% K <sub>2</sub> O
Sulfur	2.6%
Water	81%

**Storage:** AgraLi® should be stored frost-free in suitable, corrosion-resistant environment

“Realized a 40% increase in bushels/acre output on corn”

Row crop customer in Repton, AL

## SOLUTION

AgraLi® is applied directly to the soil in a number of ways. The specially adapted technology makes it possible to apply the product directly to the roots of the plant through a low-odor soil injection. As a low-chloride potash fertilizer, AgraLi® is generally suitable for all crops requiring potash, e.g. corn, cotton, peanuts, potatoes, sunflowers, pastureland.

AgraLi® is an affordable fertilizer and an ideal source of potassium.
